

~~THE~~
(SIX SPACES)

In his direct testimony, Krauch had made a big point of his cooperation with the Imperial Chemical Industry in England which, as he described it, "more or less corresponds to I.G. Farben in Germany". Krauch dwelt in detail upon the collaboration of I.G. and I.C.I. in the field of coal hydrogenation; ^{he} and boasted about how ^{IMPERIAL CHEMICALS} ~~I.C.I.~~ was able to build a large coal hydrogenation plant in Billingham, England as a result of the technical advice and assistance ^{from Farben.} given ~~to I.C.I. by I.G.~~ He mentioned a celebration which was held in England in 1935 at the time the Billingham plant was put into operation. ^{Now} ~~Then~~ on cross examination I showed Krauch a letter sent by the ^W ~~Vermittlungstelle Wehrmacht~~ to the Military Economy Staff of the ^{WEHRMACHT} ~~G.K.W.~~ in May 1939 giving the exact location of certain plants in England so that they "could be put out of action" by the Air Force "in the event of war". And in this list of plants furnished by Krauch's VW was the very same Billingham plant which according to Krauch, ^{Farmen had helped Imperial Chemicals to construct.} ~~I.G. had assisted I.C.I. to construct in 1935.~~ Was it a stretch of the imagination to suspect that one reason for ^{Farmen's} ~~I.G.'s~~ close "collaboration" with ^{IMPERIAL CHEMICALS} ~~I.C.I.~~ was to be kept informed of develop-
ments ^{OF} ~~in England~~ during this period including the precise location of strategic plants ^{IN ENGLAND?}
Krauch ^{had} also spoke^d his efforts to preserve the "independence" of Deutsche Fordwerke at Cologne. He had gone to see Goering personally about that.

"I myself knew the plants of Henry Ford," I told Goering. "I knew Ford and his son Edsel, and I told Goering that if we took the Ford independence away from them in Germany, it would aggrieve friendly relations with American industry in the future. I counted on a lot of
