

CINTECH.
Indo-China, Korea and India, he formulated a personal philosophy of economics whose ultimate meanings would not have set well with his old friends Charlie Mitchell and Walter Teagle.

He was a world thinker, he assured himself again.

World trade, he reasoned, was not unlimited as yet. It could grow only so far before it would be halted by the poor. The countries who could raise the most food and dig the richest raw materials had the lowest standards of living. ~~And~~ Until these living standards were improved, the poor in Asia could not buy the products of other countries.

Therefore, the only solution was for "the economy of the agrarian and raw material countries to be intensified." And how could this be done? For many years, thought Ilgner, there had been two main trends in Asia.-- Industrialization and Nationalization. ^P He knew what industrialization meant. "Nationalization," as he thought of it, was mystically ~~vague~~. He did not like the taking over of industries by the State; ^{still} ~~yet~~ it was senseless "to oppose the trend." So he arrived at a meaning all for himself - "nationalization meant industrialization in the national interest." ^{"P"} Did this mean government supervision of industry? No, he said. ^{for that} ~~Then perhaps~~ business should act as a kind of agent for the Government in nationalizing industries? ~~No~~ Not that either. *His counsel asked:*

Intechang
"Were you of the opinion that Farben was to support these trends?"

"Certainly, and I was to find support for all my ideas in important circles of Farben. One could only be constructive by supporting these nationalization and industrialization tendencies. If one would not cooperate, one would make bad investments: that is, wasted money and in turn wasted purchasing power. However, those efforts could only be supported if one were acquainted with the national ~~sensitivities~~ and sensitivities, and these were based
